EC

Commission Regulation (EU) No. 10/2011 of January 14, 2011, effectively replacing EC Commission Directive 2002/72/EC of August 6, 2002, as amended.

This material contains no monomers which are regulated with a specific migration limit.

This material does not contain intentionally incorporated additives which are regulated with a specific migration limit.

This material contains one or more intentionally added dual use additives which are subject to disclosure of adequate information as described in Annex IV of Commission Regulation (EU) 10/2011.

The identity of this/these substance(s) can be disclosed for testing purposes upon special request and under maintaining secrecy.

This material has been manufactured in accordance with the relevant requirements of Commission Regulation EC No. 2023/2006 on good manufacturing practice for materials and articles intended to come into contact with food.

Based on migration estimations calculated with an EU recognised mathematic migration model or migration experiments with test samples made of SABIC[®] PP PHC31 00900 , or a comparable grade and carried out in the presence of the standard food simulants during 10 days at 40°C, it is our experience that under these conditions migration limits are not exceeded.

USA

Code of Federal Regulations, issued by the Food and Drug Administration (FDA), paragraph 21 CFR 177.1520 (olefin polymers).

The adjuvants are cleared according to Part 178 (Indirect food additives) or are generally recognised as safe (GRAS), are prior-sanctioned food ingredients or are cleared on basis of regulations for food additives of before 1958.

Extraction experiments with test samples made of SABIC[®] PP PHC31 00900 or a comparable grade, have shown that extraction limits of specification 177.1520(c)3.1a were not exceeded. According to this specification, this material may not hold food during cooking.

Status: April 2010.

We wish to stress that the migration- and extraction- test results may differ significantly from the performance of the final plastic material or article under the actual and foreseeable conditions of use.

SABIC has no control over final product composition nor over processing conditions. It is therefore the responsibility of the converter or food packager that markets the final material or article to check compliance with the relevant regulations and to validate material performance in the end application through proper end use testing.

Most of the recommendations or regulations mentioned above refer to the final materials and articles that directly contact the food.

This declaration however, is restricted to SABIC[®] PP PHC31 00900 as it leaves the production facilities.

This declaration does not cover

- any substance subsequently added by the converter,
- poor material or end product due to inexpert manufacture by the converter,
- any negative influence of the finished article on the organoleptic properties of the packaged food.

As the above-mentioned Regulations develop continuously, our declarations will be adapted accordingly.

Therefore we advise the receivers to ask for a new declaration periodically.

This declaration replaces all previous ones relating to this subject.
