<b>TEMPERATURE STABILITY</b>	<b>300 ° C</b>
<b>HEAVY METALS CONTENT</b>	<b>Pb + Hg + Cd + Cr (VI) &lt; 100 ppm</b>
<b>SUITABLE FOR FOOD CONTACT</b>	<b>yes</b>

According to the German BfR Recommendation No. IX and the FDA CFR 21 § 177.1520 and CFR 21 § 178.3297 the ingredients of the above product are suitable for colouring of plastics to be applied in contact with food. We wish to point out, however, that our responsibility as Masterbatch supplier cannot be extended to include the application to which the product is put by the manufacturer. In principle, therefore, the manufacturer applying the Masterbatch will be responsible for testing the finished product in contact with food for its possible influence on the taste and smell of the food product. Particularly, when applied to packaging and storage of sensitive foodstuff, like milk for instance, the plastic material should be tested for its possible effects on the food product.

**Schwelm, 24.04.2012**
