Fill level UniAirless MIC

Information on Fill level

In order to avoid leakage of the bulk through the orifice, while snapping the pump onto the container, listed fill levels in the table below should not be exceeded.

When dispensers are extremely underfilled, the resulting air pocket between the bulk and the bottom of the pump might cause a higher number of strokes to prime.
High underfilling or big air pockets, embedded inside the bulk, can result in leakage problems during air freight. In order to avoid air pockets, we recommend using diving fill nozzles.

Model / Fill level	**Standard fill level (Piston position at 3mm)**
Mic 15ml	16,8ml
Mic 20ml	23,9ml
Mic 30ml	33,4ml
Mic 40ml	45,1ml
Mic 50ml	54,5ml
based on density 1,0 g/ml	

The residual amount in the system is approx. 1ml.
